CRITICAL MINERALS CONFERENCE

UNLOCKING CANADA'S MINERAL WEALTH - FROM ORE TO END USE

# LUNCH & LEARN

**From Consent to Corridor: Unlocking the Alberta–BC Critical Minerals Frontier Through Early Partnership**

## Overview:

This lunch and learn explores how the Alberta–British Columbia border region can emerge as a leading critical minerals corridor by pairing B.C.'s mining capacity with Alberta's processing, refining, and subsurface extraction expertise. The session will focus on a new development model centered on building relationships and consent at the outset, reducing project risk and accelerating timelines.

## Key Discussion Points:

- The Alberta–BC border as an integrated critical minerals corridor including lithium, REEs, vanadium, copper, and uranium
- Linking B.C. mining capacity with Alberta processing and refining infrastructure
- Why traditional exploration models create delays and how a consent-first approach changes outcomes
- Invicta Metals' relationship-first framework for early Nation engagement and shared project design
- Building cross-provincial partnerships that enable faster permitting and stronger investment cases
- How a "consent corridor" model can change how projects are initiated across Western Canada

## Who Should Attend:

This lunch and learn is designed for stakeholders involved in early-stage project development, regional collaboration, and critical minerals supply chain planning, including:

- Mining and exploration companies operating in British Columbia and Alberta
- Oil and gas companies exploring lithium brines and subsurface mineral recovery
- Indigenous Nations and economic development corporations
- Government representatives from BC, Alberta, and federal critical minerals initiatives
- Investors and private equity groups focused on critical minerals and infrastructure
- Midstream and processing companies interested in refining and value-added capacity
- Infrastructure developers including power, transportation, and logistics providers
- ESG, permitting, and regulatory professionals working on project advancement
